

Raymond Carle

Councillor Candidate in the City of Brampton, Ward 7, 8
Peel Region

The following answers were provided by the candidate in response to [a letter sent by the Toronto Society of Architects on September 20, 2022](#) outlining three questions related to issues of the built environment. Answers have been copied and pasted into this page for clarity and ease of access, but all answers are verbatim and no changes or edits have been made.

Q1: Housing is a fundamental human right, and yet an increasing number of residents across the Greater Toronto Area are struggling to pay rent or find an affordable place to live. What policies and actions do you believe need to be implemented to address this crisis?

A: We can build up instead of urban sprawl. We can work with some global developers and have private/public partnerships to get more units available.

Q2: The design, construction and operation of our built environment accounts for nearly 40% of energy related carbon emissions, contributing to the ongoing climate crisis affecting us today. What do you believe needs to be prioritised to reduce carbon emissions within the built environment?

A: Some developers are producing 'net zero' building projects. One project I'm personally working on is a vertical forest as a condominium. These types of ideas will be needed to reduce that 40% contribution.

Q3: In towns and cities, so much of life happens in the shared public spaces—in our parks, libraries and streets. How can we ensure these civic spaces achieve design excellence in their initial conception and construction, and that they are properly maintained so they may continue to serve future generations?

A: With proper design, we can incorporate the entire needs of the community, while saving the planet and solving the housing crisis.
