

1. Housing is a fundamental human right, and yet an increasing number of residents across the Greater Toronto Area are struggling to pay rent or find an affordable place to live. What policies and actions do you believe need to be implemented to address this crisis?

The access to high density and medium density housing is necessary from political and developmental standpoints. As well, crappy landlords need to be punished properly by the police and by-law officers for not maintaining their buildings and always pushing for rent-increases. Furthermore, the LTB needs to be overhauled and mandated out to cities where numbers warrant.

2. The design, construction and operation of our built environment accounts for nearly 40% of energy related carbon emissions, contributing to the ongoing climate crisis affecting us today. What do you believe needs to be prioritised to reduce carbon emissions within the built environment?

Denser cities which encourage walking instead driving need to be created.

3. In towns and cities, so much of life happens in the shared public spaces—in our parks, libraries and streets. How can we ensure these civic spaces achieve design excellence in their initial conception and construction, and that they are properly maintained so they may continue to serve future generations?

Build them, and they will come.
